

Swiss Express Index Part 1 : Editions 1 to 60 (January 1985-December 1999)

Swiss Express has been published, on a quarterly basis, since January 1985. To list absolutely everything would result in a very unwieldy document but selectivity means subjective judgments had to be made with the risk of annoying those who have either written the omitted items or those who wish to track down every conceivable reference to a particular subject. With apologies, therefore, this Index omits Society notices & announcements, editorials and the like, SVEA conference reports, advertisements, toy fair reports and reviews of books, films and models. Travelogue holiday reports, rail journeys to Switzerland and members' letters have mostly also been ignored unless of longer-term significance.

Railway companies have generally been listed under their present-day acronyms with an older version quoted next; however, to simplify the search the RM group appears separately from BLS. All editions contain routine updates on the SBB, BLS and RhB so hopefully only the more significant references have been included here. Some discretion has also been exercised in selecting brief updates for other railways; there is scope for much inconsistency here but, again, the intention has been to include items of longer-term interest. Items that are brief (a sentence or small paragraph) have been identified as such; at the other extreme "major" denotes an article of more than 4 pages (A5 format). Photo-only articles have been included only where the subject was already of historic interest at the time of publication. Some articles could have been listed under more than one first-column heading. For example, the FART/SSIF and TMR(MC) lines could well be defined as "Cross-border" but that category has been limited to main line international services.
